

Rose Hip Oil

1 QUALITY CHARACTERISTICS

Production process	Cold pressed
Part of the plant used	Fruit
Botanical Name	Rosa Rubiginosa
Botanical Family	Rosaceae
Country of origin	Argentina, Patagonia.
Quality	100% Pure and natural

2 DESCRIPTION

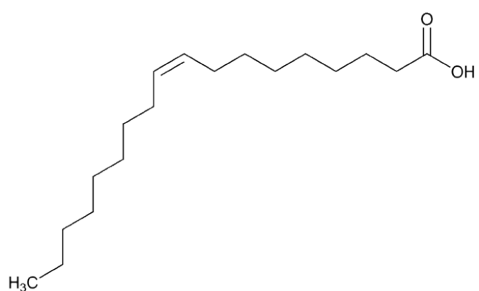

Rosa Rubiginosa belongs to the family of Rosaceae. It is a variable climbing, wild rose species native to Europe, northwest Africa, and western Asia. It is a deciduous shrub normally ranging in height from 1–5 metres, though sometimes it can scramble higher into the crowns of taller trees. The flowers are usually pale pink, but can vary between a deep pink and white. They are 4–6 centimetres in diameter with five petals, and mature into an oval, 1.5–2-centimetre, red-orange fruit, or hip. It grows wildly at a large scale in the southern Andes of Argentina (Latitude 42. S). They are the fruits of this plant that by cold pressure gives the oil.

3 USES

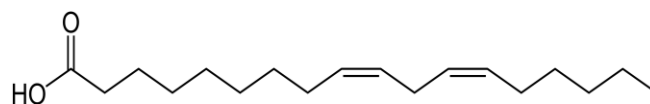

The Rose Hip oil is mainly used in the cosmetic industry for its effect of rejuvenation, anti-inflammatory and hydration of the skin.
